## Profile

---

Enthusiastic and hardworking Web Development graduate with a passion for building practical, user-focused applications. Through academic and personal projects, I have developed experience across front-end and back-end technologies, including C#, PHP, Laravel, JavaScript, and SQL. Known for being reliable, and adaptable, I am eager to begin my professional career with an organisation that values growth, innovation, and continuous learning. I am excited by the opportunity to contribute to new challenges while further developing my technical expertise.

## Education

---

### Diploma, Web Development and Internet Applications

2024 – 2026

Algonquin College, Ottawa, ON

#### Relevant Course Work

Web Programming Languages (C#, Javascript)

- Service and Client API

Applications Development (PHP, Laravel)

- Invoice Manager

Security Basics (PHP)

- Movie Mayhems

## Skills & Qualifications

---

- Python / Java / C# / PHP
- HTML5 / CSS / JavaScript / Typescript
- MySQL / MongoDB
- IDEs (Visual Studio / Data Grip / Rider)
- OOP
- Figma
- Framework (Laravel / Node.js)
- WordPress
- Version control (Git / GitHub)
- AWS (EC2 / S3 / RDS)
- Selenium

## Project

---

- Pokedex (interface with <https://pokeapi.co/>)
  - Developed a web application that allows users to browse and manage their Pokémon collection.
  - Integrated the PokéAPI using the Fetch API with async/await, implementing a two-step fetching pattern by first retrieving a paginated list of Pokémon and then requesting detailed data for each Pokémon.
  - Implemented event delegation by attaching a single event listener to the container and using `e.target.closest('.property')` to identify and handle user interactions efficiently. Created the website for the users to keep track of their Pokémon collections.
- Imageboard
  - Developed a desktop application that helps artists organize and track image references for their drawing projects.
  - Designed and implemented a custom ADO.NET persistence layer using Microsoft.Data.Sqlite, including idempotent database initialization, parameterized queries to prevent SQL injection, and connection tuning with SQLite PRAGMAs.
  - Created a normalized one-to-many database schema (boards → board\_items) with referential integrity enforced through ON DELETE CASCADE. Created desktop application where the users can keep on track with their image source when they are drawing.

[www.linkedin.com/in/stephanieofford-tech](https://www.linkedin.com/in/stephanieofford-tech) | <https://github.com/StephanieAlgonquin>

- Task Manager
  - Developed a full-stack task management web application that enables users to create, edit, delete, and prioritize tasks within custom, color-coded categories.
  - Built the application using Laravel and Livewire, implementing full CRUD functionality without requiring manual JavaScript fetch requests.
  - Leveraged Livewire's reactive components, including #[Layout], #[Validate], lifecycle hooks (mount, updatedSearchQuery), event listeners, and PHP property binding to create a dynamic, responsive user interface.

## Additional Skills

---

- Languages: English / Japanese

Hiring Manager

Ciena

Ottawa, Ontario

Dear Hiring Manager,

I am writing to apply for the RSP QA internship on the IP switching platforms team. I want to note upfront that I recently graduated from my diploma program rather than being currently enrolled, so I recognize this posting may be scoped for active students. I am applying anyway because the role's focus, Python automation, defect identification, and hands-on lab exposure to end-to-end IP systems, matches closely with both my skills and what I am looking to build my career around, and I wanted to put my name forward in case a recent graduate would still be considered.

I completed a diploma in Web Development and Internet Applications at Algonquin College, where I built a solid foundation in software development concepts and structured testing. I have working knowledge of Python, and I built a habit of writing and executing methodical test cases rather than testing casually. In a security-focused course project, I tested a PHP application specifically to identify functional and security defects, documenting outcomes clearly and tracking issues through to resolution. In a separate project, I built a desktop application with a hand-rolled data persistence layer over SQLite, including parameterized queries and connection-level tuning, work that required careful debugging of system behavior rather than surface-level checks.

While my direct exposure to packet and IP networking is limited, I am genuinely curious about the space and confident in my ability to learn quickly in a hands-on lab environment, developing and enhancing Python automation scripts as I go. I would welcome the opportunity to discuss my background and whether a recent graduate could be a fit for this term, even outside the typical active-enrollment scope.

Thank you for considering my application. I have attached my resume and would be glad to discuss my background further.

Sincerely,

Stephanie Offord
